

Car Maintenance Schedule by Mileage

Write in the mileage of the last service and mark the next threshold. Your owner's manual is what binds.

Threshold	What gets done	Last done at	Next due at	✓
5,000 mi	Engine oil + filter · tyre pressure and tread · fluid levels · wipers			
15,000 mi	Above + cabin filter · air filter · brake pad check · battery · alignment			
30,000 mi	Above + fuel filter · spark plugs (petrol) · brake fluid · suspension			
60,000 mi	Above + transmission fluid · clutch inspection · exhaust and emissions			
90,000 mi	Above + TIMING BELT KIT · full coolant change · shock absorbers			

Three notes

- Time or mileage? Whichever comes first. Under ~5,000 miles a year, time governs.
- Timing belt intervals run 60,000-100,000 miles by make — verify this line against your own manual.
- Write the last service mileage on each row; the next threshold follows on its own.
